SOLANA DEVELOPER

KEY RESPONSIBILITIES

- Design and develop smart contracts and programs on the Solana blockchain
- Implement secure and efficient on-chain programs using Rust
- Create and maintain documentation for all developed programs
- Integrate front-end applications with Solana blockchain using Web3.js
- Optimize programs for maximum performance and minimal resource consumption
- Conduct code reviews and implement best practices for blockchain development
- Debug and resolve complex issues in production environments
- Collaborate with front-end developers to ensure seamless dApp integration
- Stay current with Solana ecosystem updates and implement necessary upgrades
- Participate in security audits and implement security best practices

TECHNICAL REQUIREMENTS

- Proficient in Rust programming language and its ecosystem
- Strong experience with Solana's programming model.
- Experience with Anchor framework for Solana development
- Solid understanding of TypeScript/JavaScript for front-end integration
- Experience with Solana Web3.js and other Solana-specific libraries
- Familiarity with Phantom, Solflare, or other Solana wallets
- Understanding of SPL tokens and Token Program
- Knowledge of cryptography fundamentals and blockchain concepts
- Experience with development tools like Solana CLI, Project Serum, and Metaplex.

ADDITIONAL REQUIREMENTS

- 1+ years of experience with Solana or other blockchain platforms
- Strong understanding of DeFi protocols and tokenomics
- Experience with testing frameworks like Mocha or Jest.

SALARY

- Commensurate with experience.
